

Ovatars: Using Patient-Derived Xenografts for Selecting Best Therapies

Paul Haluska M.D., Ph.D.
Co-Director, Phase I Program
Associate Professor of Oncology
Mayo Clinic-Rochester

PRESENTED AT THE 2014 ASCO ANNUAL MEETING. PRESENTED DATA IS THE PROPERTY OF THE AUTHOR.

Learning Objectives

After reading and reviewing this material, the participant should be able to:

- Define PDX and Avatar Models
- Understand how Avatar models may be used for drug development
- Understand why Ovarian Cancer may be a good cancer type for using Avatars
- Explain how Avatars are being used to direct therapy and individualize therapy.

Presented by: Paul Haluska M.D., Ph.D.

@Ovatars

PRESENTED AT:

Outline

- Project Overview
- Characterization
 - Gross, Histological, Molecular
- Novel Therapy development
 - PARP inhibitor
 - Use of US for monitoring
 - Potential for Collaborations
- Avatar Directed Therapy

PRESENTED AT:

Barriers to Better Ovarian Cancer Outcomes

- Screening
 - Neither common nor rare
 - Imaging/serum markers- disappointing
- Vague symptoms
 - No longer the 'silent killer', but...
- Late stage at diagnosis
- Treatment not customized

Presented by: Paul Haluska M.D., Ph.D.

@Ovatars

PRESENTED AT:

Ovarian Avatar Project

Presented by: Paul Haluska M.D., Ph.D.

PRESENTED AT:

ASCO

50th ANNUAL MEETING
SCIENCE & SOCIETY

Definitions

- Xenografts- tumors from one species implanted in another
 - Most commonly human in mouse
- Orthotopic- in the natural location
- Patient-derived xenografts- xenografts implanted directly from patients (i.e.- no plastic)
- Avatars- Orthotopic, treatment-naïve PDX's
- Ovatars- Our Ovarian Avatar modeling system

Presented by: Paul Haluska M.D., Ph.D.

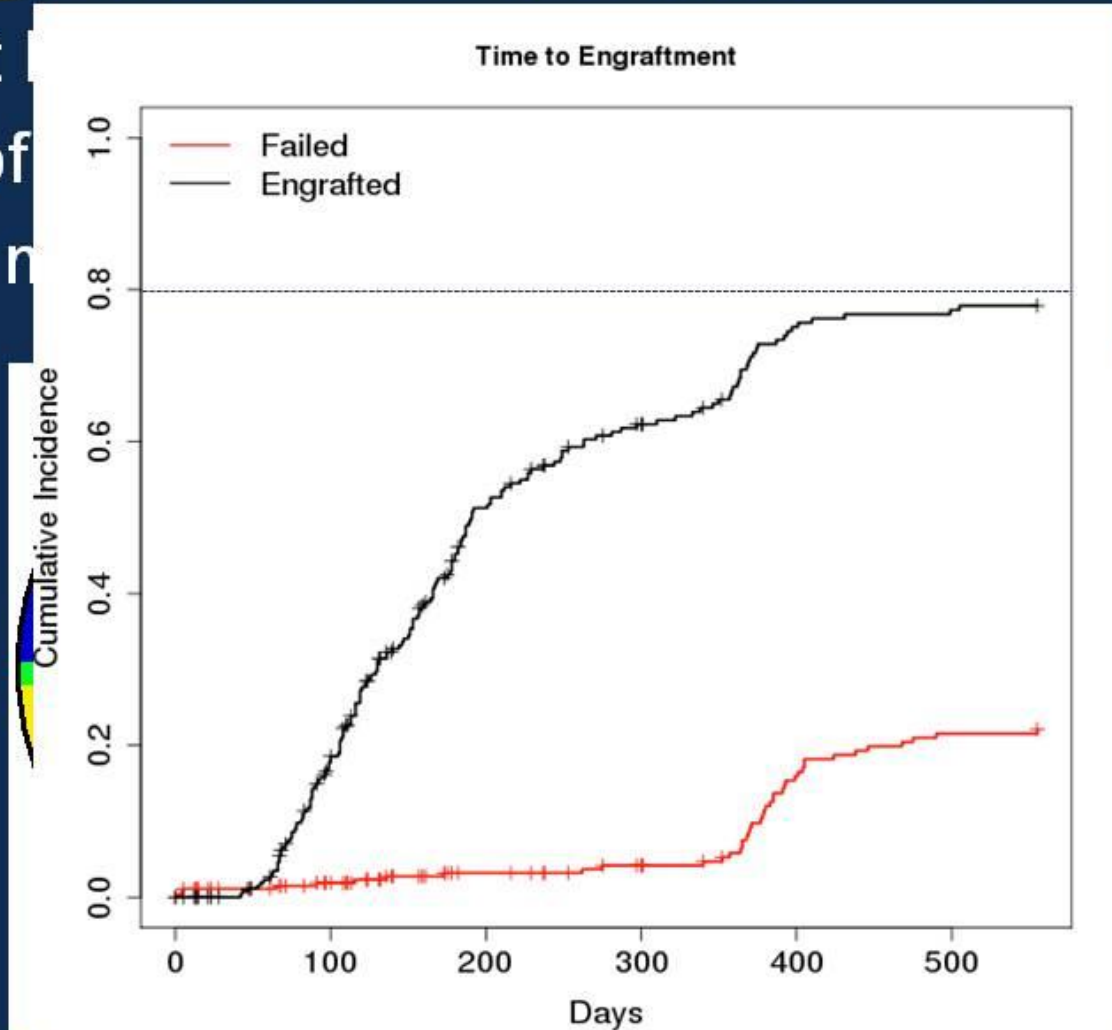

@Ovatars

SCIENCE & SOCIETY

Ovarian avatars recapitulate clinical complications of donor patient tumors

PRESENTED AT:

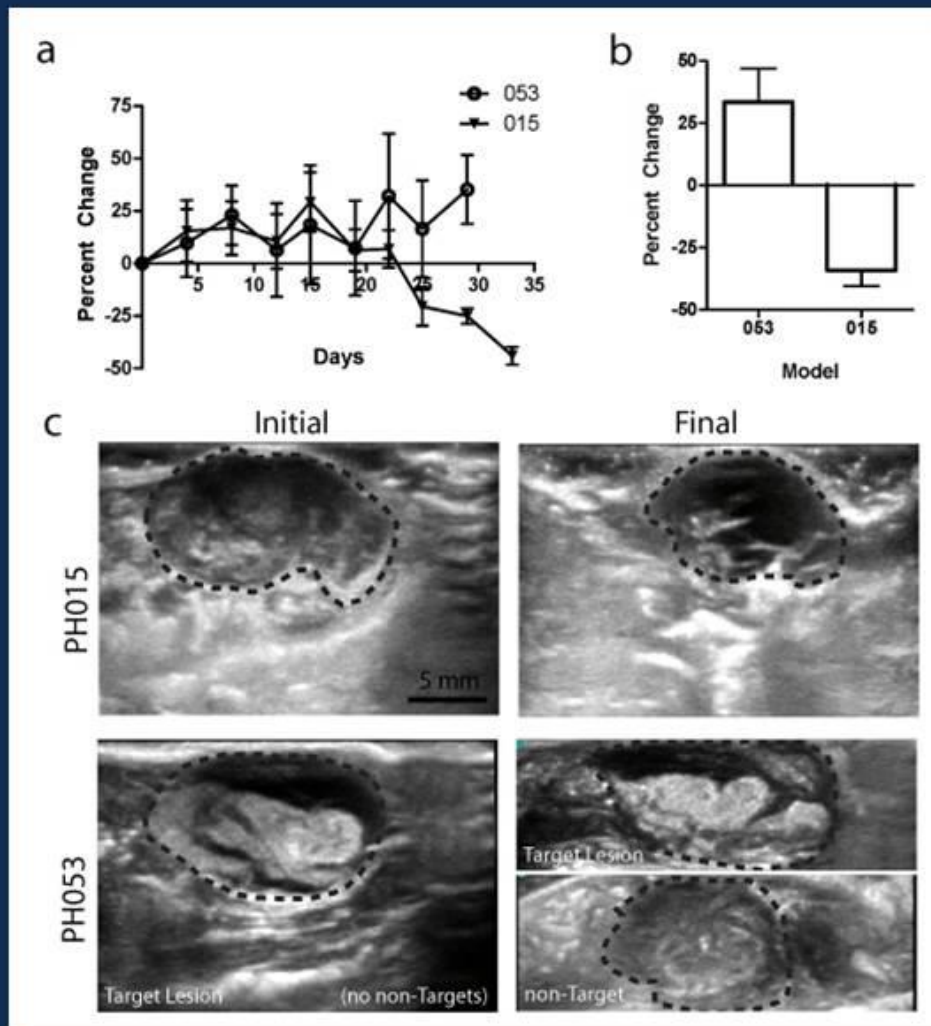

Criticism:

“While cell lines are not predictive of therapeutic response, neither are xenografts”

PRESENTED AT THE 2014 ASCO ANNUAL MEETING. PRESENTED DATA IS THE PROPERTY OF THE AUTHOR.

Avatar Predictive for Platinum Response

PH053

- Stage IIIC serous OC
- Received TC x 6
- Recurred within 6 mo

PH015

- Stage IIIC serous OC
- Received TC x 6
- Disease free >2 yrs

Presented by: Paul Haluska M.D., Ph.D.

PRESENTED AT:

Avatar Predictive for Platinum Response

Presented by: Paul Haluska M.D., Ph.D.

PRESENTED AT:

Drug Development Example

1. Test Hypothesis that HR-Deficient models most sensitive to PARP inhibition

- *HR deficient vs. HR proficient*
 - *Genotyping: BRCA*
 - *Functional: RAD51 foci*
 - *In-vivo: Avatars*

Next Step:

Directing Patient Therapy

PRESENTED AT THE 2014 ASCO ANNUAL MEETING. PRESENTED DATA IS THE PROPERTY OF THE AUTHOR.

Modulation of Effective Response Rate

Presented by: Paul Haluska M.D., Ph.D.

PRESENTED AT:

MC1463- Avatar Trial

-each patient's Avatar directs her own therapy

PRESENTED AT THE 2014 ASCO ANNUAL MEETING. PRESENTED DATA IS THE PROPERTY OF THE AUTHOR.

Ovarian Cancer Practice and Natural History

- Excellent tumor type for this approach
- LOTS of tumor tissue available
- High engraftment rate
 - Non-engrafters→ Do well
- Frontline treatment fairly uniform
 - Still surgery first...mostly
- Most go into remission
- Most come back, but median PFS (>20 mo) allows for model development
- No clear 'winning' standard salvage
- No clear predictive marker

PRESENTED AT:

Avatar Directed Therapy

- First Ovarian Trial with Xenograft-Directed Therapy
 - Enterprise wide... other US sites next?
- Truly individualize- Each woman's Avatar will help her!
- Idea: The best predictor of response... is response!
 - Genotyping too complex in *most cases*
 - Treatment relevant subtypes unlikely
- Do we really know our 'standard' therapies?
 - Do same patients respond to each?
 - Can we predict resistance?
 - We will be able to determine the genotype of responders to each type of chemo
 - We will also be able to determine genotype on non-responders
- Pilot SuperAvatars- Avatars w/ source patient Immune system

Presented by: Paul Haluska M.D., Ph.D.

@Ovatars

PRESENTED AT:

Conclusions

- Generating Avatars in ovarian cancer is feasible
 - High engraftment rate
 - Recapitulate patient disease
 - Histology, Biology, Molecularly, Therapeutically...
- Useful as drug development tool
 - Large number of models can sort on marker of interest
- Natural history of ovarian cancer lends well to the idea of directed therapy

Presented by: Paul Haluska M.D., Ph.D.
